

# 1 Wikipedia table scrap

Our next goal is going to be to scrap all the data from the yahoo finance for a list of 505 companies that are part of the S&P 500 index.

To do this we first need to know what all of these companies are and what their ticker symbol is.

In this exercise please write a webscraper that gets the ticker symbol (called Symbol in the table) from the Wikipedia entry on the S&P 500 companies.
